

# Mail Folders Startup guide

TechKnowledge

2010/8/15

## About this document

---

This is minimal startup guide of Mail Folders Application.

## Settings

---

After downloading from App Store, you will see mail account setup screen. Please setup your Imap account as follows.

Following is the setup information for mail providers currently supported.

Mail Provider	User-ID	Password	Imap server

name			
Softbank	Softbank mail address before @ mark.	E-mail (i) password stroed in SMS157message.	imap.softbank.jp
Gmail	Gmail address	Gmail password	imap.gmail.com
MobileMe	MobileMe mail address before @ mark	MobileMe password	mail.me.com
AOL	AOL mail address	AOL mail password	imap.aol.com

After setting up your email account information, you will see current folder list in the mail screen.

## Creating mail folder

---

Here's steps for creating new mail folder in your mail account.

1. Start Mail Folders application.
2. Tap + button in down right corner of main screen.
3. Type in the new folder name.

4. Tap Done button.
5. After a while you will see new folder name in main screen.
6. Terminate Mail Folders application by tapping home button.
7. Start Mail application.
8. Make sure new folder is also shown in your folder list. If you don't see it, please tap sync button.

### Moving mails to folder in Mail.App by hand.

---

You can move mail to new folder by hand in iPhone's Mail.app. Here's steps to move mails in Mail.app.

1. Start iPhone's Mail.app
2. Open the mail that you want to move to the folder.
3. Tap the following button shown bottom of the screen.

4. Select target folder from the folder list screen.

## How to delete a mail folder

---

Here's steps to delete mail folder.

1. Start Mail Folders application.
2. Tap edit button on upper right of screen.
3. Tap red button shown left side of folder name that you want to delete.
4. Red delete button will shown right side of folder name. Tap this delete button.
5. Folder delete will be performed if you tap YES to delete confirm message. Please note that all mails contained in the folder will also be deleted.
6. After you have complete, tap the edit button on upper right of screen.

## Setting up mail redirection rules.

---

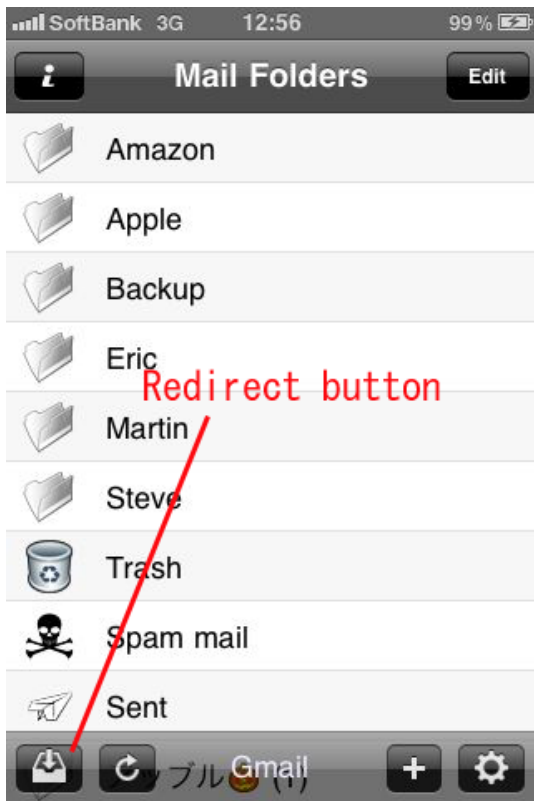

You can specify mail redirection rule for each folder you have created in your mail account. Here's steps for setting mail redirection rules.

1. Start Mail Folders application.
2. Tap folder name you want to setup mail redirection rule.
3. Select "Edit redirection rule" from menu shown.
4. Tap + button in bottom right of rule list screen shown.
5. Type mail address that you want to redirect to the folder. You can also pick up from your address book by tapping detail disclosure button on right of address input box.
6. After you have set mail address, tap done button.
7. Redirect rule list screen will be shown with your new mail address you have typed. You can specify multiple mail addresses by performing steps 3 to 6 multiple times.
8. After you have finished redirection rule inputs, please type back button onf bottom left of the screen.

## Execution of mail redirection.

---

After you have setup your mail redirection rules, you can start mail redirection by tapping redirect button on the bottom left of main screen. If you have a lot of mails in your INBOX, it takes very long time to complete. So you need to stay in the good network area in order to finish this operation.

Processing messages will be shown in the middle of main screen. After you have done with this operation, please make sure your mails are moved by iPhone's mail application.

#### How to use multiple mail accounts.

---

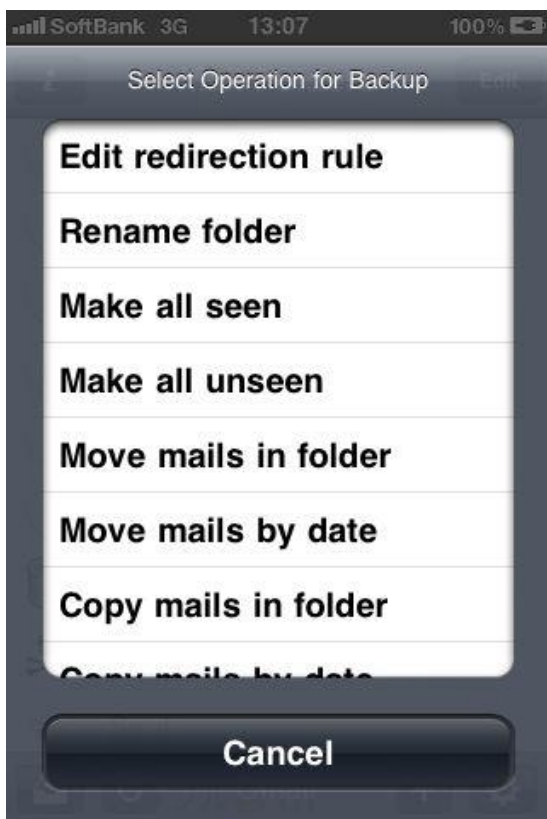

Mail Folders supports multiple mail accounts. Here's how to add multiple mail accounts.

1. Tap setup icon (gear button) in bottom right of main screen.
2. Tap edit button on upper right of options screen.
3. Tap new account line of mail account list.
4. Type in mail account information in mail account setup screen.
5. Type done button on upper left of mail account setup screen.
6. Type done button on upper left of options screen.

The check marked mail account is the currently effective in Mail Folders application.

## Folder operation menu.

---

Here's description of folder processing menu shown when folder name is selected in main screen.

1. Edit redirection rule.  
Will show redirection rule edit screen for selected mail folder.
2. Rename folder  
Renames folder name selected.
3. Make all unseen.  
Make all mails unseen state in the folder selected.
4. Make all seen.  
Make all mails seen state in the folder selected.
5. Move mails in folder

Move all contents of folder selected to destination folder.

6. Move mails by date

Move all mails in selected folder to destination folder sorted by date. Mails will be sorted by date and stored into destination mail folder.

7. Copy mails in folder.

Copy all mails in selected folder to destination folder specified.

8. Copy mails by date

Copy all mails in selected folder to destination folder specified. Mails will be sorted by date and stored into destination mail folder.

9. Redirect other than INBOX.

Perform folder redirection for selected folder. Note that redirect source folder is not INBOX.

10. Move all inbox Contents

Move all mail in your INBOX to selected folder. Performing this operation will empty your INBOX.

11. Copy all inbox contents

Copy all mails in INBOX to selected folder. Use this operation for backing up your INBOX contents to another folder, etc.

## Process options on setup screen.

---

Here's details of process options in setup screen.

1. Mail process type

You can specify type of mail process for mail redirection.

ALL => process all type of mails.

seen => process seen mail only

unseen => process unseen mail only

## 2. Maximum mail count to process

You can specify maximum number of mails to process.

If you have a lot of mails in your INBOX, you can specify number of mails to redirect.

## 3. Redirect at startup

You can start mail redirection when you have started this application.

## 4. Newer mails first

If this option is on, Mail Folders starts scanning mails from newer mails in INBOX. Makes sense if you specify maximum mail count to process described in #2 above.

## FAQ

---

### 1. Can I use SMS/MMS ?

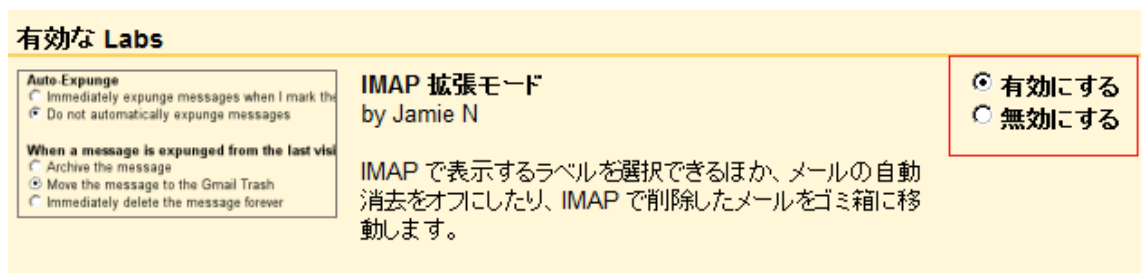

NO. The SMS/MMS uses very different protocols and which is not open for third parties. Please use Imap protocol mail providers.

### 2. Can I Yahoo mail ?

NO. You cannot use Yahoo mail as this email supports only POP3 protocol.

### 3. Mails remain in INBOX after redirection. I'm using Gmail account.

You may need to enable Labs option and setup extended Imap mode. Please login Gmail web mail and setup extended imap option.

The screenshot shows the '有効な Labs' (Enabled Labs) section in Gmail. It features three main areas: 'Auto-Expunge' with radio buttons for 'Immediately expunge messages when I mark the message as read' (selected) and 'Do not automatically expunge messages'; 'When a message is expunged from the last visible mailbox' with radio buttons for 'Archive the message', 'Move the message to the Gmail Trash' (selected), and 'Immediately delete the message forever'; and 'IMAP 拡張モード by Jamie N' with a radio button for '有効にする' (Enable) which is selected, and '無効にする' (Disable). Below the IMAP mode section, there is a descriptive paragraph in Japanese: 'IMAP で表示するラベルを選択できるほか、メールの自動消去をオフにしたり、IMAP で削除したメールをゴミ箱に移動します。'

Select auto delete option or complete delete option from the following imap access option.

**IMAP アクセス:**  
 (IMAP を使用して他のクライアントから Gmail にアクセスします)  
[表示形式の詳細](#)

**ステータス: IMAP 有効**  
 IMAP を有効にする  
 IMAP を無効にする

**自動消去**  
 IMAP でメールに削除マークを付けたらすぐに消去する  
 メールを自動的に消去しない

**最後に表示された IMAP フォルダからメールが消去されると:**  
 メールをアーカイブ  
 メッセージをゴミ箱に移動  
 メールを今すぐ完全に削除する

**フォルダ サイズの制限**  
 IMAP フォルダ内のメッセージ数を制限しない  
 IMAP フォルダ内のメッセージ数をこの件数に制限する

**メール クライアントの設定** (例: Outlook, Thunderbird, iPhone)  
[設定手順](#)

We are very sorry that we can show only Japanese setup screen.
